Summary information about NGN service.

"Wakeup"

This service helps to remind you about your scheduled actions. The telephone automatically rings in time specified by subscriber, and after taking off the handset, the system sounds the notification.

Call waiting

This service allows you to be always available, despite that you are on line. Upon receiving of new call while you are on line, you will hear a tonal prompt signal, and calling subscriber hears notification. Therefore, you can take or reject the call.

Abbreviated dialing

This service allows subscriber to make calls dialing abbreviated number consisting of 2 digits instead of dialing total number of called subscriber, and it noticeably saves the time.

Callback if busy

If the line is busy, this service allows subscriber automatically connect with called subscriber after clearing out of the line.

Conference call

If it is required a third party's (or more) participation in your conversation, this service will help you with that. It allows several subscribers to have conversation with each other simultaneously. The quantity of participants of conference call can reach 64 ones, including an initiator.

Call handoff.

This service allows called subscriber to handoff incoming call to third party. You can handoff the incoming call to any selected number of subscriber.

Call hold.

You can set the call on hold, in that way, clearing out the line. At the same time, the hold subscriber can enjoy the played melody.

Unconditional call forwarding.

If you are not able to reply your phone call at some moment, you can switch on call forwarding service. This service allows you automatically redirect all incoming calls to another specified number, regardless of service subscriber's status.

Caller ID.

This service allows you to identify calling subscriber. You can identify missed calls and recall them.
